State	Finished
Completed on	Thursday, 21 March 2024, 4:40 PM
Time taken	19 mins 32 secs
Grade	15.00 out of 15.00 (100%)

Question 1

Complete

Mark 1.00 out of 1.00

Active Directory (AD) is a distributed database that stores objects in a hierarchical, structured, and secure format. AD's objects typically represent users, computers, peripheral devices, and network services.

- ☒ True
- ☐ False

Question 2

Complete

Mark 1.00 out of 1.00

In Windows 2000 Server and Windows Server 2003, the directory service is named Active Directory. In Windows Server 2008 and Windows Server 2008 R2, the directory service is named Active Directory Domain Services (AD DS).

- ☒ True
- ☐ False

Question 3

Complete

Mark 1.00 out of 1.00

A domain is a logical administrative container for objects such as users and computers.

- ☒ True
- ☐ False

Question 4

Complete

Mark 1.00 out of 1.00

.....are a collection of administratively defined objects that share a common directory database, security policies, and trust relationships with other domains

- ☐ a. Trees
- ☐ b. Objects
- ☐ c. Forests
- ☐ d. Organizational units
- ☒ e. Domains

Your answer is correct.

Question 5

Complete

Mark 1.00 out of 1.00

.....is a collection of trees

- ☐ a. Object
- ☐ b. Organizational unit
- ☒ c. Forest
- ☐ d. Domain

Your answer is correct.

Question 6

Complete

Mark 1.00 out of 1.00

To open Active Directory Users and Computers you can click Start, click Run, and then type dsa.msc.

- ☒ True
- ☐ False

Question 7

Complete

Mark 1.00 out of 1.00

A child inherits the domain name of its parent in a DNS hierarchical naming convention. Example: "iprctumba.rp.ac.rw" inherits the domain name of "rp.ac.rw"

- ☒ True
- ☐ False

Question 8

Complete

Mark 1.00 out of 1.00

The Active Directory structure is comprised of the following main components:

- ☐ a. Objects
- ☐ b. domains
- ☐ c. None of them
- ☒ d. All of them
- ☐ e. O.U
- ☐ f. forests
- ☐ g. trees

Your answer is correct.

Question 9

Complete

Mark 1.00 out of 1.00

FSMO are used in active directory to manage domain controllers and FSMO roles give you confidence that your domain will be able to perform the primary functions of authenticating users and permissions.

- ☒ True
- ☐ False

Question 10

Complete

Mark 1.00 out of 1.00

Microsoft split the responsibilities of a DC into 5 FSMO roles that together make a full AD system. In Windows, those 5 FSMO roles are: Schema Master, Domain Naming Master, Relative ID (RID) Master, Primary Domain Controller (PDC) Emulator, and Infrastructure Master .

- ☒ True
- ☐ False

Question 11

Complete

Mark 1.00 out of 1.00

Which default folder under a domain within Active Directory Users and Computers contains the Administrator user account and Domain Admins group?

- ☐ a. Computers
- ☐ b. Desktop
- ☒ c. Users
- ☐ d. Forest
- ☐ e. Builtin

Your answer is correct.

Question 12

Complete

Mark 1.00 out of 1.00

You have created a template user account within Active Directory Users and Computers. What must you do to create additional user accounts based on this template user account?

- ☐ a. None of them
- ☒ b. Right-click the template user account, and click Copy
- ☐ c. Right-click the template user account, and click Paste
- ☐ d. Double click on the template user account

Your answer is correct.

Question 13

Complete

Mark 1.00 out of 1.00

Prestaging means to **add a computer** to the Active Directory database before joining the computer to the domain.

- ☒ True
- ☐ False

Question 14

Complete

Mark 1.00 out of 1.00

Before installing Active Directory on a Windows Server system to function as an additional domain controller within a forest, you must first ensure that the Windows Server is configured to contact a DNS server that contains the appropriate service records for the forest.

- ☒ True
- ☐ False

Question 15

Complete

Mark 1.00 out of 1.00

Active Directory is a technology created by

- ☐ a. Google
- ☐ b. IBM
- ☒ c. Microsoft

Your answer is correct.

- ☐ IBM
- ☐ Google
- ☐ None
